Guidelines for Service & Maintenance of AMOT Valves

Service every 4 years is recommended for AMOT valves that are installed and operated in accordance with the valve's 'Installation, use and maintenance manual'.

A 2-year service interval is recommended when or more of the following conditions occur:

- Actual flow, pressure or temperature is higher than the recommended max values for the valve
- The liquid in the system has a very high or low pH, or other demanding chemistry
- Sea water application
- Errors/deficiencies in the system's design that make the valve working conditions more demanding.

A 6-year service interval is recommended when one or more of the following conditions occur:

- Actual flow, pressure or temperature is significantly lower than the recommended max values for the valve
- The liquid in the system has a pH close to 7 or there is an absence of other demanding chemistry. I.e.: using gear oil or fresh water with glycol

Furthermore, it is strongly recommended that all valve seals should be replaced after any inspection and valve cleaning.

Custom Solutions, Surface Treatments & Other Spares

Beyond our in-stock spares, we supply all service parts for **AMOT valves**. We also provide a wide range of **surface treatments**, such as **NORSOK**.

Facing system challenges? Our experts help troubleshoot existing setups and develop **robust, custom-engineered solutions**. From standard parts to tailor-made designs — we've got you covered.
